

Career Objective

In pursuit of a role within an innovative organization where I can bring my passion for learning, enthusiasm and adaptability to fuel continuous personal and professional development.

Work Experience

Intern - AWS / DevOps Engineer

Aug 2025 - Present

[Full Stack Academy, Hyderabad, India.]

- Utilized **Git/GitHub** for version control and collaborative development.
- Configured **Jenkins** scripts for automated and seamless continuous Clone, Build, Test and Deployment integration in different registries.
- Executed software builds and deployment with **Docker** for optimized scalability.
- Optimized container memory utilization by up to **70%** and significantly reduced the container launch time by **80%** Set up and managed AWS services: **EC2, S3, VPC, RDS, IAM, ELB, Route 53, CloudWatch**.
- Proficiently established and managed VPCs, Subnets, and cross-zone connections for robust networking using SCP Automated configuration management with **Ansible**. Orchestrated containers using **Kubernetes** for scalability and resilience.
- Employed **Terraform** for EC2,VPC,ALB,S3.

DevOps Tools :

- Git
- Github
- Maven
- Sonarqube
- Tomcat
- Jenkins
- Docker
- Kubernetes
- Terraform
- Ansible
- Sonatype
- Nexus
- Nginx
- Trivy
- OWAPS
- Apache
- BashScripting
- Python
- Grafana
- Prometheus
- Linux and Windows

Artificial Intelligence & Machine Learning Intern

June 2025 – September 2025

[InLighnX Global]

- Developed and implemented predictive models by leveraging diverse real-world datasets and various machine learning algorithms.
- Contributed to AI-driven solution development through direct collaboration with cross-functional mentors and team members.
- Applied practical experience in an industry setting, significantly enhancing technical proficiency and problem-solving abilities.

Amazon Web Services (AWS) :

- EC2, S3, VPC, RDS, EBS, EFS, IAM, AMI, SNS, ELB, ECS, ASG, Route 53, AWS Lambda, Event Bridge, DynamoDB, Red Shift, CloudWatch, CloudFront, CloudFormation, Elasticbeanstalk

Data Analyst Intern

May 2024 – June 2024

[Unified Mentor]

- Analyzed a dataset of the top 500 companies in India, focusing on market capitalization and quarterly sales to uncover key business insights.
- Applied data science techniques to identify meaningful relationships between financial attributes, helping management improve strategic decisions.
- Utilized Python libraries like Pandas, NumPy, and Matplotlib to process and analyze data, ensuring robust and insightful findings

AI/ML:

- YOLO, Machine Learning, Deep Learning,
- Natural Language Processing, Data Visualization

Course & Certifications

- AWS & DevOps Certificated 2025** (Full Stack Academy, Hyderabad)
- Cloud Computing Fundamentals 2025** (IBM)
- Docker Essentials 2025** (IBM)
- Cloud Essentials 2025** (IBM)
- Building Cloud Native & Multicloud Application 2025** (IBM-Cognitive Class)
- Prompt Engineering for Everyone 2025** (IBM-Cognitive Class)
- Getting Started with Artificial Intelligence 2024** (IBM SkillBuild)
- Artificial Intelligence Fundamentals 2024** (IBM SkillBuild)
- 100 Days of Code: The Complete Python Pro Bootcamp 2021** (Udemy)

Education

B.E - 2025

Muffakham Jah College of Engineering and Technology.
[Artificial Intelligence & Machine Learning]
(First class with Distinction)

Intermediate - 2021

Narayana Junior College,
Hyderabad, Telangana.

DevOps Project

CICD Pipeline for 3 tier Java Application to deploy Using Jenkins, SonarQube , Nexus, Slack, Docker, Kubernetes.

[Dec -2025]

- Cloning the code and building the artifacts
- Integration of Jenkins & Sonarqube for static code analysis
- Storing the artifacts in with SonarType Nexux
- Dockerizing Application and publishing the image to DockerHub
- Utilized Kubernetes for zero-downtime deployments, enabling seamless scalability

Deployed Scalable VPC architecture with NAT, IGW, Route 53, Load Balancer's and S3

[Oct -2025]

- Created VPC with subnets, NAT, and security groups.
- Configured Route 53 for domain management.
- Implemented Application Load Balancer.
- Conducted data migration from S3 to Glacier for cost-effectiveness.
- Defined VPC with CIDR notation, security layers, and subnets.
- Established VPC peering for secure communication.
- Enabled internet access in private subnet through Network Address Translation using an Internet Gateway for enhanced connectivity within the VPC infrastructure.
- Set up S3 lifecycle rules for automated object transitions.

AWS-Jenkins CI/CD Pipeline and Containerization for React Deployment

[Dec-2025]

- **Cloud Infrastructure:** Provisioned an AWS EC2 (Ubuntu) instance , established a secure sudo user , and configured UFW firewall rules to restrict access to ports 80, 443, 3000, and 22.
- **CI/CD Pipeline Development:** Implemented a full Jenkins Pipeline job to automate the entire application lifecycle, including stopping deployment, pulling fresh code from Git , building the React project (using NodeJS/npm), and deploying.
- **Artifact Management:** Integrated an S3 Jenkins plugin and updated the pipeline to upload built application artifacts (dist folder) to an AWS S3 bucket for persistent storage and backup.
- **Application Deployment:** Managed application processes using PM2 and configured Nginx as a reverse proxy to serve the React application via HTTP.
- **Containerization:** Developed a lightweight Dockerfile to containerize the React application's distribution files (exposed on port 3000) and utilized Docker Compose for container orchestration and management.

AI&ML Projects

ATSS - Automated Traffic Surveillance System

[April/2025 - June/2025]

Description: A traffic surveillance system employing AI technologies for monitoring.

Key Contributions:

- Developed AI-driven traffic monitoring using YOLOV8 for vehicle detection.
- Implemented a license plate recognition system with 95% accuracy for traffic enforcement.
- Used Python, OpenCV for computer vision, and SQL databases for data management.

MATHIFY-Ai Powered Math Solutions

[May/2024 - July/2024]

- Platform: Developed MATHIFY, an AI-Powered Math Solutions platform designed to solve a wide range of mathematical problems (arithmetic to advanced calculus).
- Core Technology: Leverages advanced AI models and artificial intelligence to accurately interpret and solve complex math questions.
- Key Features: Provides step-by-step explanations and offers personalized, interactive learning experiences to support user comprehension.
- Target Audience: Serves a broad user base, including students, teachers, and professionals, making mathematics more accessible and engaging for all skill levels.
- Functionality: Designed to deliver quick, accurate math solutions and aid learning through an intelligent platform.
